Tips for Protecting Your Identity Online

Be proactive! Consider some simple actions you can take to help safeguard your personal information.
Create Strong Passwords

The longer, the stronger. Try using passphrases, which are easier to remember. Use special characters (!@#$%&). Don't reuse passwords.

Don't Use Public Wi-Fi

If you must, avoid online banking, shopping with credit cards, and making other financial transactions.

Watch For Suspicious E-mails

If you are unfamiliar with the sender or content, delete the e-mail. Don't click links for unfamiliar sites. Don't open attachments from unknown senders. If you're still unsure, search the internet for a legitimate website or phone number to verify the e-mail content.
Watch For Suspicious Websites

Verify the web address before entering personal information. Make sure it begins with http<u>s</u> and look for the padlock symbol.

Keep Devices Up To Date

Regularly update software on all your internet-connected devices. Delete apps you don't use. Delete personal content and data from old devices.

Got you covered!

The UJS Web Portal...

- is secure. See the padlock at **https://ujsportal.pacourts.us**.

- enforces minimum requirements that promote stronger passwords.

- has safely processed hundreds of millions of dollars in online payments.

Watch What You Share

Don't share personal information, travel information, or vacation photos (at least until you get home) on social media. Manage your privacy settings.
